

APPLICATION SHEET

WELDING ENAMELED WIRES

METAL

■ The task

Individually enamelled copper wires are to be securely welded to a copper terminal, working through the coating.

■ The solution

This welding task is possible with PowerWheel technology without any problems – without stripping the wires beforehand!

■ The advantages

The high pressure and high output required for this welding task can only be achieved with this technology. With this technology it is not necessary to strip the wires beforehand.

The application was carried out on a PowerWheel using appropriate components for the special rigging.
