Shenzhen (China), 05/2019

The Swiss Telsonic Group has been offering its industrial ultrasonic solutions through representation in Europe, America and Asia since 1966. Already in China (main office in Shenzhen) since 2007 and more recently in Korea (Seoul, Uiwang Gyeonggi-do) since 2017, with around 40 employees, Telsonic is doing business with local and international customers in the automotive supplier industry.

In both countries Telsonic concentrates on ultrasonic joining technology (metal, plastic) for international OEM suppliers (including VW, BMW) as well as local suppliers for Chinese OEMs (including SAIC Motor, Great Wall Motors). As in all of Telsonic's country-based subsidiaries, the business begins with application advice and sampling done in local laboratories by experienced application technicians. Ultrasonic welding presses and ultrasonic systems contain a technical core, perhaps the most powerful ultrasonic generator on the market in the MAG series. Based on the latest technology, making real-time results available and offering "Made in Switzerland" quality, both of Telsonic's Asian subsidiaries can also benefit from the electro-mobility boom. Current application examples include the ultrasonic welding of electrical contact parts on cable strands and battery cells. Telsonic has already been very successful in supporting the "lightweight automotive" trend in Europe and the USA through its patented SONIQTWIST® technology in the application "thin-wall welding" for bumpers for example (SPE Innovation Award 2018). The ultrasonic welding of plastics has been one

- 02 Sehoon Sohn, Country Manager, TELSONIC Korea Co., Ltd.

of Telsonic's specialties for years and, in both China and now also Korea, local customers are benefiting from our system expertise in relation to application solutions and technology for plant construction.

Continuous training and the sharing of experience between sites lends additional support to Telsonic's international customers in China and Korea. Thus Telsonic is following its customers from Europe and America in particular to the production sites in China with specifically trained service technicians and local spare parts supply, offering local availability and know-how. Many well-known tier-1 companies in the automotive and packaging industries have already made use of this advantage.
