In Europe, Telsonic is adding the vibration friction welding process from Korean manufacturer Daeyoung to its portfolio of plastic bonding technologies. The successful business relationship already enjoyed by the two companies in the North American market (U.S., Canada, Mexico), will therefore now be extended to Europe, Russia and North Africa. To that end, the Telsonic GmbH center of excellence in Germany has been expanded to assist users on-site with the best possible support and technical service, from design to tool manufacturing.

Typ 930e

A global partner of the automotive industry

By taking over distribution, Telsonic is taking the next step as the automotive industry's global partner for bonding technology. "We look forward to adding Daeyoung's vibration welding systems to our portfolio as of the fourth quarter of 2020," explains Dr. Axel Vietze, Chief Executive Officer & Chairman of the Telsonic Group. "Together with our partner Daeyoung, we will, in future, offer a wide range of systems with an impressive variety of functions that will increase manufacturing quality. We look forward to further developing the Daeyoung brand in Europe, and to also consolidating the synergies from our long-standing partnership in America." Daesik Cho, Chairman & Founder of Daeyoung Ultrasonic Co, Ltd adds: "In Telsonic, we have found the ideal sales partner for the important European market because the company has a great team, with plenty of experience, and a high level of expertise."

About Daeyoung Ultrasonic Co, Ltd

Headquartered in Bucheon, South Korea, with more than 250 employees, Daeyoung Ultrasonic Co, Ltd. is a major producer of vibration welding systems. Numerous international automotive suppliers have trusted Daeyoung for more than 30 years.

About Telsonic

The Telsonic Group, headquartered in Bronschhofen (Switzerland), has been providing ultrasonic technology solutions in Europe, America and Asia since 1966. Constant innovations help ensure that, in many applications, the company has established a lead over competitors that offers added value to users. With more than 250 highly-qualified staff, the owner-managed family company has specialized in plastic and metal welding as well as ultrasonic cleaning, screening and cutting. Current trends mean that these skills are in strong demand, e.g. for lightweight construction, electromobility, battery production, the packaging industry, medical technology and 3D printing.
