

Success for TELSONIC at POWTECH 2016: 19 – 21 April

Once again this year [TELSONIC](#) made the trip to the German city of Nuremberg to take part in POWTECH, the leading trade fair for the mechanical processing, analysis and handling of powder and bulk solids. 891 exhibitors from 31 countries showcased their latest innovations. With approximately 16,000 visitors (a 7% increase on 2014), the trade fair is one of the largest in its specialist field.

At this year's POWTECH, TELSONIC presented two new products:

- SONOSCREEN@cyclone, the new ultrasonics application for more efficient screening performance in eddy current screening machines. This space-saving ultrasonics solution is also ideal for retrofitting.
- The brand new ultrasonics components for powder recovery systems combine sustainable use of resources during processing with minimum powder loss and reduced costs.

The live demonstrations of these innovations caught the attention and interest of many visitors to the stand.

Visitors were impressed by the open and light TELSONIC trade fair stand at which the concept behind the exhibits on show was very clear.

We would like to take this opportunity to thank all of the visitors to our stand and, of course, the entire TELSONIC team for such a successful trade fair at which we made numerous new contacts and were able to engage in many interesting discussions.

Lex Wirz, Process Technology Product Manager, TELSONIC AG
