TELSONIC and KMF Messtechnik GmbH agree to a collaboration for quality equipment in the field of ultrasonic welding

The Telsonic Group, based in Bronschhofen (Switzerland), one of the leading suppliers in the range of industrial ultrasonics solutions, and the company KMF Messtechnik GmbH, based in Sömmerda (Germany), a leading supplier of solutions surrounding quality equipment for the cable-processing industry, have announced a strategic collaboration. The Telsonic Group is taking responsibility for the exclusive global sales and customer service of the products developed together in the field of industrial ultrasonic welding.

KMF Messtechnik has been developing and manufacturing equipment for use in quality monitoring as well as devices and software for crimp process monitoring for the cable processing supplier industry, focusing on the automotive industry, for over 20 years. Due to its partnership with Telsonic, its experience can now be applied to the field of ultrasonic welding technology. For Telsonic, the new cooperation represents an option to respond to client quality requirements more rapidly in the future.

The first product to result from the partnership was launched on the market in May this year. The Telsonic Quality Control Center TQCC is a quality control station that can interface with multiple Telsonic welding machines on the production floor as a failsafe Quality Control system.
